SUMMARY

Software Engineer with 3+ years of experience building and scaling web applications across frontend and backend using Angular, React, Node.js, and Spring Boot, with direct experience shipping fixes and improvements that reduced customer-facing incident investigation time from 1 hour to 10 minutes and cut load times by 50%. Comfortable working cross-functionally with Product, Design, and QA to translate real-world requirements into scalable solutions, and experienced in integrating modern AI tooling (Cursor AI) into development workflows to accelerate delivery. Thrive in fast-paced environments, always building toward mastering the craft.

EXPERIENCE

Rogers Telecommunications Inc.

Brampton, ON, Canada

Software Engineer

Oct 2022 – June 2025

- Built a real-time **Angular** application (**TypeScript**, **RxJS**, **NgRx**) that marketing teams use to configure promotions and discounts, contributing to a **25% reduction in rate card melt**; partnered with product managers and designers to turn requirements into production UI.
- Cut load times **50%** for large datasets by redesigning component architecture with **lazy-loaded modules**, **OnPush change detection**, and centralized **NgRx** state.
- Reduced average incident investigation time from **1 hour to 10 minutes** by integrating **Dynatrace RUM** and centralized logging into real-time frontend performance and error dashboards.
- Resolved **20+ high-risk vulnerabilities** with Product, Security, and QA teams while holding release dates in an Agile/Scrum process.
- Shipped to **Azure Kubernetes** through Azure CI/CD pipelines and built versioned **Spring Boot** REST APIs consumed by the frontend.

QA Engineer

May 2022 – Oct 2022

- Automated **200+ unit and E2E tests** with **Playwright**, cutting manual regression effort by **90%**; published reports via Monocart Reporter and Akamai NetStorage.
- Wrote and executed **100+ test cases** across the **Angular** frontend and Spring Boot APIs using Postman, SoapUI, and Katalon, logging **10+ defects** in Jira and reaching 100% test case validation within project deadlines.

IBM Canada

Markham, ON, Canada

Internship, Software Engineer Intern

May 2019 – August 2020

- Built full-stack features for B2B web platforms and a **JavaScript** internal results dashboard; automated **90%** of manual end-to-end test cases using Protractor, Jasmine, and Postman.

Scotiabank

Scarborough, ON, Canada

Internship, Software Engineer Intern

January 2019 – April 2019

- Developed a full-stack JSP web application used by **40+ back-office users** to analyze and validate incoming bank transactions (Java EE, Apache Tomcat, HTML); gathered requirements from business stakeholders and iterated on user feedback.

PROJECTS

Auto Shop Inventory Management System

jaycenusa.github.io/auto-shop-inventory-management-system

Personal Project – Frontend Web Application

- Built a **React**, **TypeScript**, and **Tailwind CSS** inventory app with bulk-edit workflows, **React Hook Form** validation, drag-and-drop image uploads, and before/after previews for multi-record updates.
- Implemented automated low-stock and out-of-stock alerts across **100+ SKUs**.
- Used **Cursor AI** for component scaffolding, refactoring, and debugging.

EDUCATION

York University

Toronto, ON, Canada

Bachelor Degree of Computer Science

August 2021

SKILLS

Frontend: Angular, React, TypeScript, JavaScript, RxJS, NgRx, HTML5, CSS3, Tailwind CSS, React Hook Form

Testing: Playwright, Page Object Model (POM), Cypress, Protractor, Jasmine, Postman, SoapUI, Katalon, Swagger UI

Backend & Data: Node.js, Java, Spring Boot, C, SQL, Bash, PostgreSQL, Oracle, IBM DB2, Algolia, Contentful

Tools: Git, GitHub, GitLab, Bitbucket, Azure Kubernetes, Dynatrace, Datadog, Jira, Agile/Scrum, Cursor, GitHub Copilot
